

The Department Materials Science and Engineering of TU Delft invites its academic, industrial and societal partners

Symposium, March 31, 2023

Steel for Sustainability

Delft, Prinsenhof, 10:00 – 17:30 hours

Steel is everywhere! It is the most applied metal worldwide and an essential tool in accomplishing the energy and materials transition that mankind faces. Sustainable production, use and recovery of steel and steel products will lead to a strong push towards a society based on sustainable technology. However, in order to make full use of its potential we should not take steel for granted. We need to understand steel and its role in society: its past, its present, its future. We need to look at scientific aspects, economic importance, environmental impact and societal indispensability to make a jump towards materials sustainability.

So join us if you want to understand steel
Registration via email: infomse-3me@tudelft.nl
(max. 150 participants)
